

Design Handover

Payment breakdown

The vast majority of the work has been in the gov prototype kit - including sketches.

<https://github.com/DFE-Digital/NPQ-Alpha-Prototype>

The latest versions are in:

<https://github.com/DFE-Digital/NPQ-Alpha-Prototype/tree/master/app/views/version-18/payments>

There is a fair amount in here including early sketches and things that didn't work.

You can see the latest variations and versions we are iterating here:

<https://npq-alpha-prototype.herokuapp.com/>

When you make a new commit to the github repository above it automatically updates the herokuapp. Muqi in the digital support teams can give you access to the GitHub and herokuapp (although you probably don't need access to the heroku as it works automatically)

I have put the very early sketches as a PDF here in case you need them:

<https://github.com/DFE-Digital/NPQ-Alpha-Prototype/tree/master/app/views/sketches>

The payment breakdown is essentially showing 2 user groups how much will be paid to providers for their CPD services at the end of a period of time. It's similar to an invoice.

The 2 users groups are:

Internal

There are several internal user groups that Kerry can go into detail about. From a design point of view we are almost there with creating a payment breakdown that matches their needs. The latest version is here:

ECF - <https://npq-alpha-prototype.herokuapp.com/version-18/payments/ecfBreakdownv8>

NPQ - <https://npq-alpha-prototype.herokuapp.com/version-18/payments/npqList> which clicks into <https://npq-alpha-prototype.herokuapp.com/version-18/payments/npqBreakdownv7>

Provider

The provider version of the payment breakdown has used the internal version as a starting point but has some changes to it. This is currently in research to see what the users need and is likely to change more than the above. Here are the versions to date:

ECF

- First version - <https://npq-alpha-prototype.herokuapp.com/version-18/payments/ecfBreakdownProviderv1>
- Testing a version with additional info about delivery partners in the accordion - <https://npq-alpha-prototype.herokuapp.com/version-18/payments/ecfBreakdownProviderv2>
- Testing a version that links to the delivery partner in a separate page, this is effectively a sketch - <https://npq-alpha-prototype.herokuapp.com/version-18/payments/ecfBreakdownProviderv4> and then links to <https://npq-alpha-prototype.herokuapp.com/version-18/payments/deliveryPartnersSept>
- This is a sketch of a page that might show a breakdown of the uplift fee per delivery partner - <https://npq-alpha-prototype.herokuapp.com/version-18/payments/upliftSplitJan>

NPQ

NPQ is still early and based on the internal version:

<https://npq-alpha-prototype.herokuapp.com/version-18/payments/npqBreakdownProviderv1>

Sandbox Journeys

The dev team have created a set of pages that allow users to access a sandbox environment to experience what various services look like as a user.

We quickly redesigned this some time ago, this project may come back again. Here is the design to date (the content will at least need updating).

The current version has everything on one page with several green action buttons. We redesigned it to create a more GDS style service that took users through a set of questions and broke the information up into smaller chunks. This was done quickly as a slightly more than a sketch and there is room for iteration and improvement.

<https://npq-alpha-prototype.herokuapp.com/version-12/sandbox>

Most of the routing and logic is in the routes.js file - <https://github.com/DFE-Digital/NPQ-Alpha-Prototype/blob/master/app/routes.js> this isn't production level code and there is a lot in there but you should be able to find the bits you need by searching for the last part of URL the page is directing to. e.g. `"/sandbox/choosy"` would find the relevant logic for the sandbox "choose a service to test" page

There are other projects in this GitHub repository for the programme as a whole but won't be relevant for this team - particularly the stuff around NPQ registration etc.

I'm happy to keep an eye on slack until I am kicked off so please feel free to contact me with any questions (I know it can be difficult sometime to pick up someone else way of working) - rob.jenkins.uxdesign

You can also email me on rob.jenkins@gmail.com or whatsapp on 07747 61 65 67 (whatsapp is better as I am unlikely to pick up a call from a number I don't know)
